Ultimate Internet Safety - Discover The Best Methods Of How To Protect Yourself, Your Family And Your Computer When Using The Internet And Ensure You Stay Safe Online. As a Microsoft Certified Systems Engineer, I have been working with computers in one form or another for many years across many different types of industries. I have seen the advent of the internet back in the late 80â€™s and early 90â€™s and watch it grow into the vast technical wonder it has become today. During my career I have been heavily involved in rolling out solutions to ensure internet protection for both company applications, services and online security for company employees and email systems.   Due to the nature of the roles I have undertaken, by default I became a central point of advice for family, friends, colleagues and clients on the topic of internet security and internet security products, both for personal and corporate use and have spent countless hours â€œcleaningâ€• computer systems and removing viruses, trojans, spyware, malware and other such nasties. Internet Security can be a very involved subject, and I have always derived great satisfaction from trying my best to help others. To this end it is my family and friends who have encouraged me to write this book to try and explain in more laymanâ€™s terms how one can go about internet security at home, and in doing so I hope that my advice will prove useful to you in the constant battle against online threats. These days we are able to make use of the internet using a lot of different devices, not just computers and laptops but now we have wireless tablets and smartphones too. It should be noted that we need to take security precautions to protect both ourselves and each and every device we use to connect to the internet, and the purpose of this book is to highlight the reasons why, what to look out for and how to get protected. Staying safe online and Internet Security has become more and more essential in our world today. Whether we use the internet via our computer, tablet or smartphone all the risks involved and how they can affect us stays the same. These threats include Identity Theft, Viruses, Worms, Trojans, Adware, Malware, Spyware, Phishing, Pharming, Keyloggers, Rogue Software and possibly the most annoying of all, the dreaded Email Spam. I have written my ebook, â€œUltimate Internet Safetyâ€•, in laymanâ€™s terms as much as possible with the aim to show that you do not have to be a technical wizard to be able to understand internet security and online safety. I created the ebook in an attempt to try and help and guide as many people as possible to what threats and risks exist out there on the internet. It is my hope that by bringing these internet risks to peopleâ€™s attention that they would become empowered with the relevant knowledge required to stay safe online. This knowledge is not hard to learn and will assist greatly in being able to advise and help protect family members including our children, (who are possibly the most vulnerable of all when it comes to internet security) with the best methods to remain protected. By taking certain security steps you will be able to guard against the multitude of internet risks lurking out on the internet, and not only protect yourself but also your computer system and your precious personal data, which in most cases is irreplaceable for some people. Happy Surfing and whatever you do - stay safe online ! Best wishes David Grahams Author of Ultimate Internet Safety
